

-
- Caesar was able to introduce the new calendar WITH the extra day every four years that the Egyptians could not
 - Caesar invented the leap year in 46 B.C.E.!
 - But the current Roman year was out of sync with the real time
 - It was almost one hundred days out
 - So he added days throughout the calendar to finally make a year that would correct their problem
 - It was a 445 day year that Caesar called “the last year of confusion”, others simply called it “the year of confusion”

What did the new calendar look like?

Month Number	Name	Meaning	Number of days
1	Januarius	Janus	31
